

SHAPIRO & Co
since 1979

**Aquamarine Diamond Ring in 18ct White Gold dated 1971, SHAPIRO & Co since 1979
£2,250.00**

Q: What is Aquamarine?

A: Aquamarine is the name used for the mineral beryl within the colour range of greenish blue to blue.

Beryl was once one of the world's only important ores of beryllium metal. However, the extraction of beryllium is very expensive. These days, small amounts of beryl are a by-product of gemstone mining.

Aquamarine gemstones can range from a very light hue to much deeper, vibrant shades of blue. The term aquamarine is derived from a combination of two Latin words. The first one, aqua, means water and the second, marina means sea. Together, the word translates to the colour of the sea.

Condition	Excellent
Materials	Gold
Main Gemstone	Aquamarine
Main Gemstone Cut	Oval Cut
Carat for Gold	18 K
Main Gemstone Carat	2ct approximately
Hallmark	1971
Secondary Gemstone	Diamond
Secondary Gemstone Carat	Total weight 0.46ct approximately
Secondary Gemstone Cut	Brilliant Cut
