

Necklace/Collar in Gold Tone Base Metal date circa 1970, Lilly's Attic since 2001

£125.00

Q: What does base metal gold mean?

A: Base metal is basically a mixture of a few metals to form one base metal that is durable and desirable for jewellery. The most common base metals are copper, lead, nickel, tin, aluminium, and zinc. Base metal, like sterling silver can also be gold plated if you want to add that luxurious golden glow.
