

Ruby Diamond Ring in 18ct Gold dated Birmingham 2007, Lilly's Attic since 2001
£875.00

- Silica glass has been used extensively to fill cavities and fractures in rubies since the 1980s. Cavity filling was noted first, and it was described as early as 1984 (Kane, 1984). This filling did improve the stones' face-up appearance and could add weight, but it could also readily be detected with magnification.

Period	21st Century and Contemporary
Condition	Excellent
