

Diamond Emerald 14ct White Gold Ring date circa 1970, SHAPIRO & Co since 1979
£4,250.00

The emerald cut diamond's history begins with its adaptation from the table cut, which was originally developed for cutting emerald gemstones in the 1500s. This cut was chosen for emeralds to reduce pressure and prevent chipping during the faceting process, due to their lower hardness and tendency for inclusions. Diamond cutters soon recognised the practicality of this shape and applied it to diamonds, though the term "emerald cut" didn't become widespread until the 1920s, during the Art Deco period.

Period	1970s
Condition	Excellent
Materials	Gold

Main Gemstone	Diamond
Main Gemstone Cut	Emerald Cut
Carat for Gold	14 K
Main Gemstone Carat	1.03ct approximately
Secondary Gemstone	Emerald
Secondary Gemstone Carat	Total Weight: 0.50ct approximately

Antique ref: SHAPIRO & Co
