

Omega, Swatch Moonswatch "Mission on Earth – Desert"
£340.00

Swatch x Omega MoonSwatch “Mission on Earth – Desert” | 42mm | Bioceramic | Full Set

The MoonSwatch “Mission on Earth – Desert” is one of the three Earth-inspired models in the Swatch x Omega Bioceramic MoonSwatch collection, celebrating our planet's unique natural landscapes as viewed from space. This “Desert” edition draws inspiration from the vast sandy expanses that cover over a fifth of the Earth's surface, resulting in a warm and refined colour palette that's both versatile and distinctive.

Its sand-coloured Bioceramic case and taupe dial combine beautifully with matching subdials and a tonal VELCRO® strap. Paying tribute to the experimental Omega Speedmaster Alaska II and III projects, this model features radial subdials that echo the design codes of vintage prototypes, making it an elegant yet playful nod to Omega's adventurous spirit.

Our View

The MoonSwatch “Mission on Earth – Desert” captures the warm tones and serene beauty of Earth's natural deserts. Its soft sand Bioceramic finish and elegant taupe dial make it one of the most understated and wearable models in the MoonSwatch range — a perfect blend of Omega's space legacy and Swatch's creative design.
